Meeting Agenda

Group: Good People
Date: 2019-09-24
Participants: Richard, Anton, Charles, Saga, Lo

Reports from previous meeting

Everybody started working on their user stories.

Anton has made the UI part of his user story, but hasn't connected it to the model yet. He's also currently working on integrating Travis to our project.

Richard has made both his logic and view and he's now wondering if the validation of the input from the form for creating an account can be put in the view.

Saga, Lo and Charles has made methods for their user stories, but are still struggling with trying to grasp the view part of android app development.

Objectives

- Trouble shooting

Discussion and assignments

We're discussing how to test our methods, since everyone needs a user och a deed for testing their methods. Charles and Saga solved this through setting the user constructor to public and thus enabling the possibility to create a user for their tests.

Richard explains (to the rest of us) how to connect buttons in the view to methods in the controller. In xml: android:onclick → method in view → method in controller → method in repository → method in model

We're discussing where exceptions should be caught. Since we can't come to a conclusion we decide to postpone this question for the meeting with Dr. Gerdes.

Saga and Lo will work on their views together, since "add account" and "edit account" should look like the same form to the user, with just the functionality of the buttons differing.

During the week we'll try to meet up and code together.

Next meeting

Friday 27/9 at 9.00
